When Your Classroom Feels Chaotic

What to Notice and What to Try | A Quick-Reference Guide for Early Childhood Educators

WHEN YOU NOTICE...	CONSIDER TRYING...
Children dump out baskets of toys, and cleanup becomes overwhelming.	Offer fewer materials at once. Keep favorites accessible and rotate others as interests change. During cleanup, help children focus on one type of material at a time.
Children move between play areas without settling into play.	Notice which materials interest them. Make those areas inviting with a few accessible materials or join the play briefly to help spart engagement. Allow time for children to explore and make choices.
Children become frustrated when it's time to change centers.	When possible, allow children to finish what they're doing or stay longer in an area. If a transition is necessary, give a gentle warning, acknowledge their feelings, and offer a way to return to their play later.
You find yourself repeatedly saying, "Don't touch that."	Notice what children are reaching for and why. Move materials that aren't available out of reach, make appropriate materials accessible.
You spend a lot of time preparing new activities.	Choose a few books and experiences to revisit throughout the week. Use materials already in your classroom and build on children's interest rather than preparing something new every day.
The classroom feels noisy or busy.	Notice what's contributing to the noise. Reduce background music, move closer instead of calling across the room, or spread-out crowded play areas. Remember, engaged play doesn't have to be quiet.

Remember: Meaningful learning doesn't always require a planned activity. Counting blocks, exploring nature, and having conversations all provide opportunities to support children's development.

A SIMPLE STRATEGY | SEE THE CLASSROOM THROUGH CHILDREN'S EYES

Sit at children's level for a few minutes while maintaining supervision. Notice which areas they visit, what captures their attention, and whether the environment makes play or cleanup more difficult.

One small adjustment is enough to start.

These suggestions are possibilities, not solutions for every child or classroom. Consider children's developmental needs, interests, and individual circumstances.

Little Years Big Impact
Small moments. Meaningful connections. Big impact.
